

WATER DIVISION

Drinking and domestic water

The image features a tall, cylindrical water tower with a circular observation deck at the top, set against a dark blue background. The tower is illuminated from below, creating a strong vertical light gradient. In the foreground, there are several overlapping, semi-transparent geometric shapes in various shades of blue and teal, creating a modern, abstract composition. Two thin horizontal lines are present: one near the top of the tower and another near the bottom of the frame.

NCR Biochemical intervenes
in the entire drinking water
cycle, from preparation to
distribution, and also for the
protection of end-users.

POTABILISATION

We have specific clarification programs for the potabilisation phase to increase the removal of suspended solids, colour and pollutants, while also minimising the volume of sludge.

POLIFLOC PWG SERIES

- PWG (Potable Water Grade) Coagulants and Flocculants

STORAGE AND DISTRIBUTION

During distribution we intervene to safeguard systems, meters and users from scaling and corrosive phenomena (red water), thereby protecting investments and reducing the need for extraordinary maintenance. We also intervene by restoring tanks and distribution systems through cleaning and sanitising.

BIOCLEAN PLUS AND BIOCLEAN COMPLEX SERIES

- Descalers and sanitising products for suspended or buried pipes and tanks

ALIFOS SERIES

- Corrosion and scaling inhibitors for distribution systems and end-users, formulated with food-grade active ingredients and/or compliant with European Pharmacopoeia and UNI EN reference standards

END-USERS

For end-users, for drinking and domestic water supply (hot and cold) we provide specific scaling and corrosion inhibiting treatments plus bactericide treatments against Legionella Pneumophila, in compliance with current regulations.

SANITER LP SERIES

- Specific bactericides against Legionella Pneumophila, compliant with the BPR (EU Regulation 528/2012)
- Polyfunctional scale and corrosion inhibiting bactericide formulations for the treatment of domestic water supply systems, for the control of Legionella Pneumophila

Through studies in the field and at our R&D laboratories, our technical support service can identify the best technical and economical solution tailored to specific needs. NCR has control and automation systems, used with the dosing of additives, which allow maximum flexibility in treatment and the optimisation of costs.

NCR Biochemical is an international chemical company specialized in water treatment, biotechnology and process additives in the paper and sugar industries. We produce the best chemical technologies, find the best solutions for our customers, develop our own dosing systems and have thirty years experience and expertise in pursuing quality, safety and environmental responsibility. We confront the global industrial reality with a comprehensive scientific approach which brings benefits and results to our clients.
